New TV — UX Scenario

App ID: online.newtvglobal.tv · Version 1.0.6 · Seller: New TV · Contact: newtvglobalonline@gmail.com · newtvglobal.online

1. Overview

New TV is an IPTV player. The app does not include or sell any channels or content: the user adds a playlist from their own IPTV provider (M3U/M3U8 link or Xtream get.php link) in **Settings > My playlist**. The player shows live channels with a program guide (EPG), catch-up, a movie section, favorites and search.

Alternatively, a playlist can be attached to the TV remotely: the start screen shows a device code and QR code, and a provider that works with New TV can link a playlist to that code; the app then loads it automatically. There is no login, password, sign-up or payment in the app.

How to test: on the first screen press **OK** on **"Watch demo"** — the full interface opens with sample channels, program guide and movies (public test streams). To test your own playlist: go to **Settings > My playlist > Add playlist (M3U link)**, enter any public M3U link (for example https://iptv-org.github.io/iptv/index.m3u) and press OK. No test account is needed.

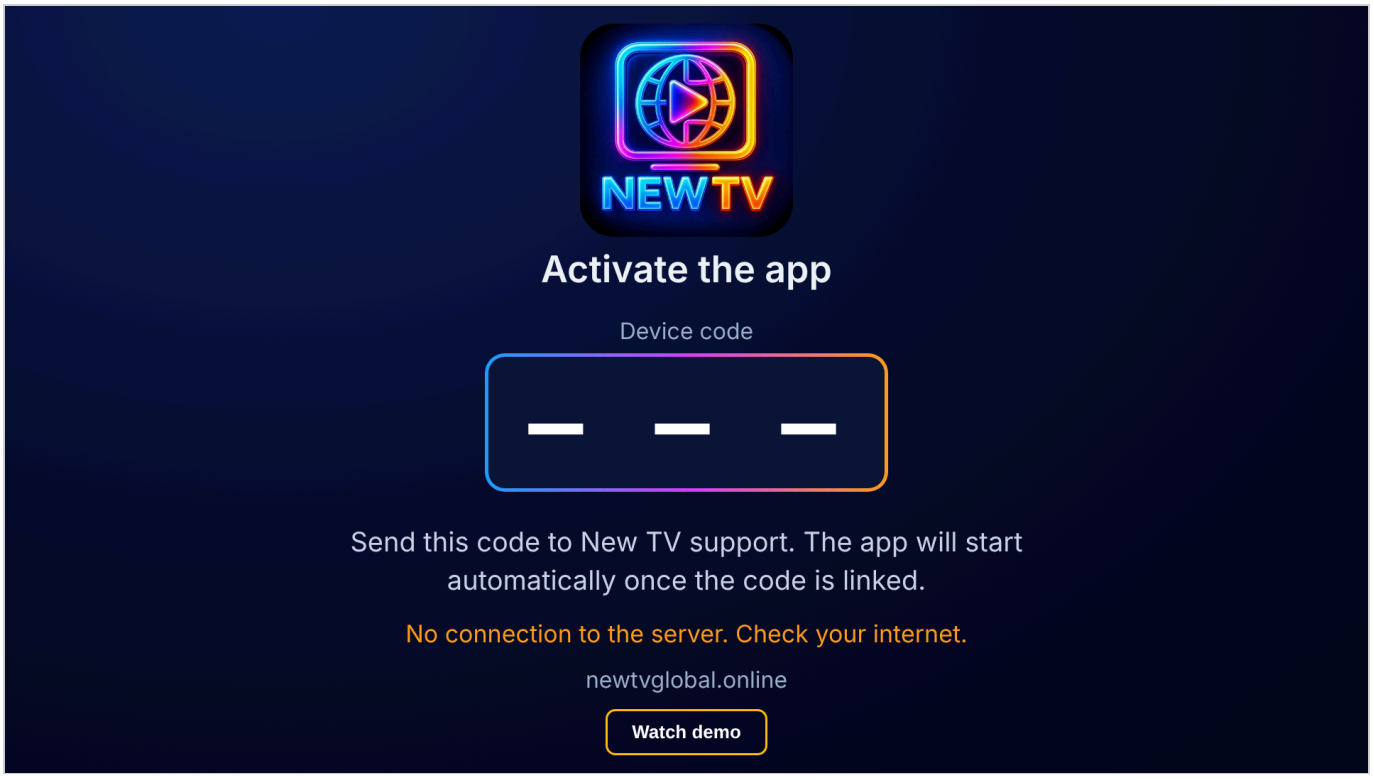

Language: the interface follows the TV language (English is used for English and other non-supported TV languages). It can be changed in **Settings > Language** (English, Russian, German, Ukrainian, Kazakh).

2. Remote control

Key	Action
Arrow keys	Move focus; Left/Right switches columns (categories – channels – program guide), Up from the lists goes to the top menu
OK	Open / play the focused item. Hold OK on a channel: add to / remove from Favorites
BACK	Return to the previous screen. On the main screen BACK shows "Press BACK again to exit"; a second BACK closes the app
CH+ / CH−	Next / previous channel during playback
0–9	Direct channel number input
Play/Pause, FF, RW	Pause and 30-second jump in catch-up and movies
Magic Remote	Pointer: click any item to select/open it; wheel scrolls the focused list

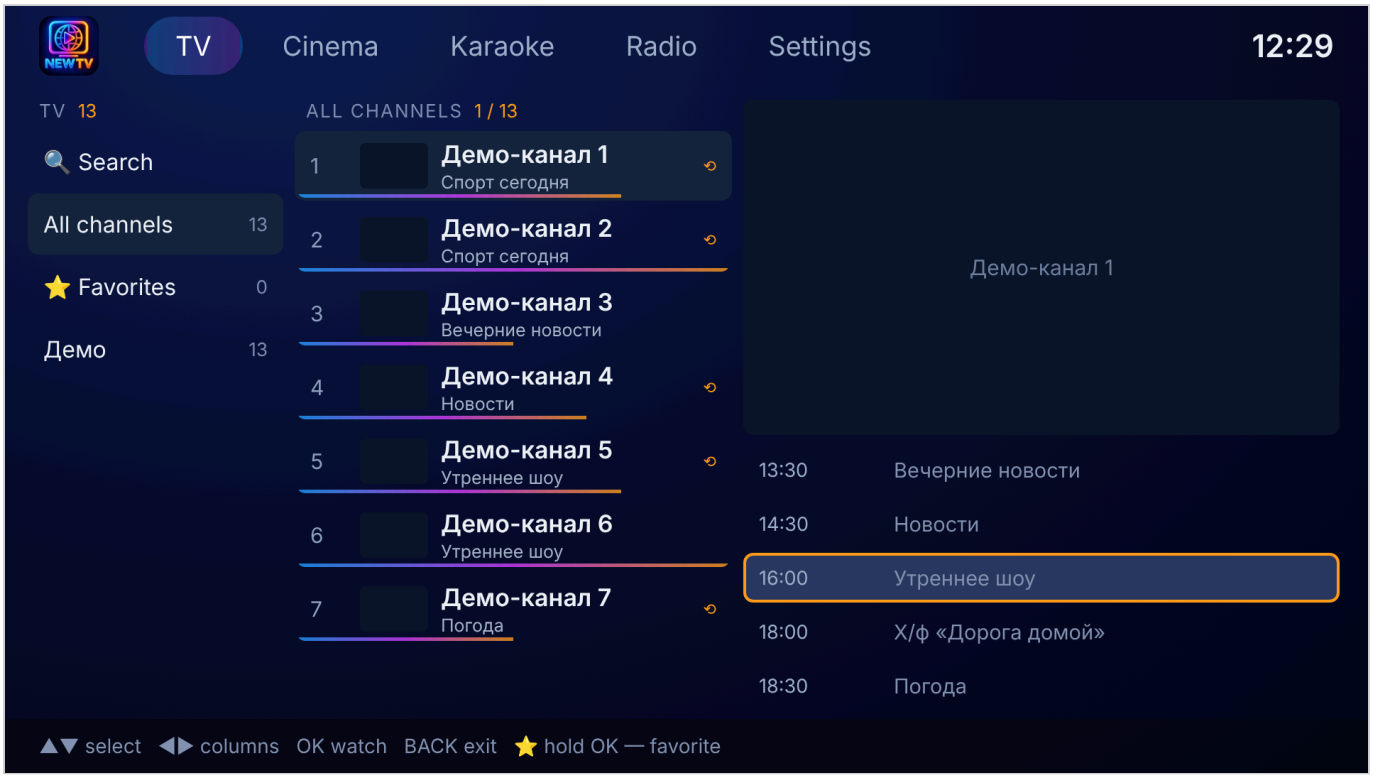

3. Scenario

Step 1 — Launch / activation screen. The app shows the device code, a QR code and the "Watch demo" button. Real subscribers send the code to support; the app polls the server and opens the channels automatically after activation.

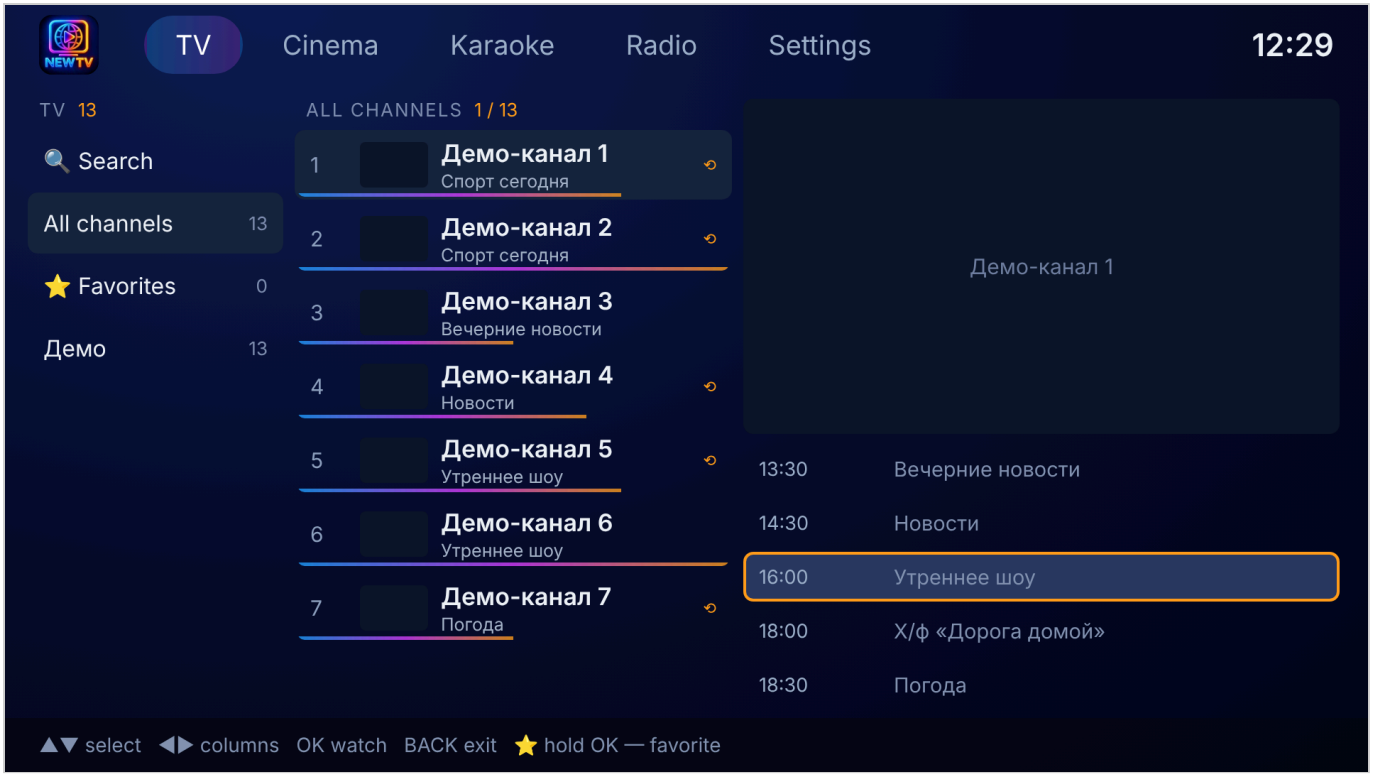

Activation screen (no network in this screenshot — on a TV the device code is shown).

Step 2 — Press OK on "Watch demo". The TV section opens: categories on the left, channels in the middle, preview and program guide on the right.

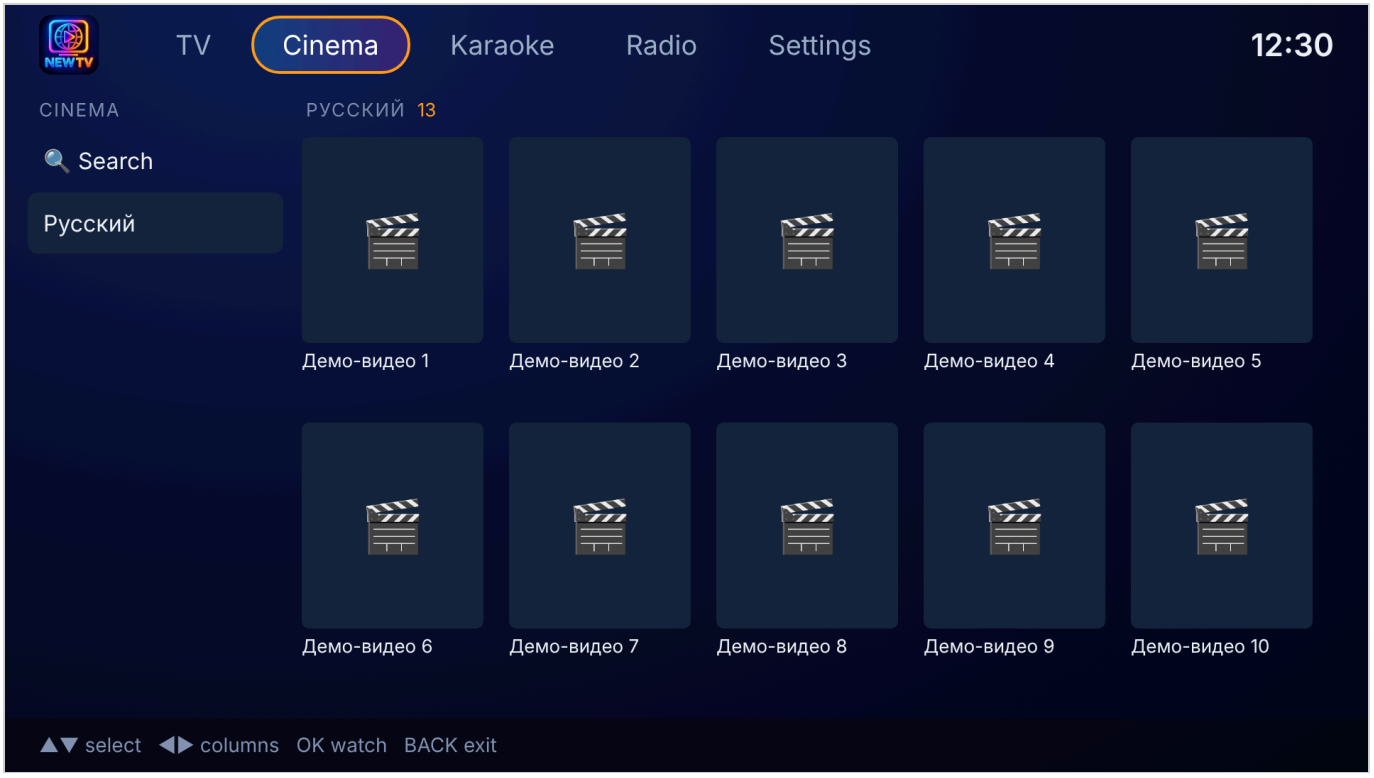

Step 3 — Program guide and catch-up. Press Right to move to the program guide. Past programs marked with ⟲ can be played from the archive (OK).

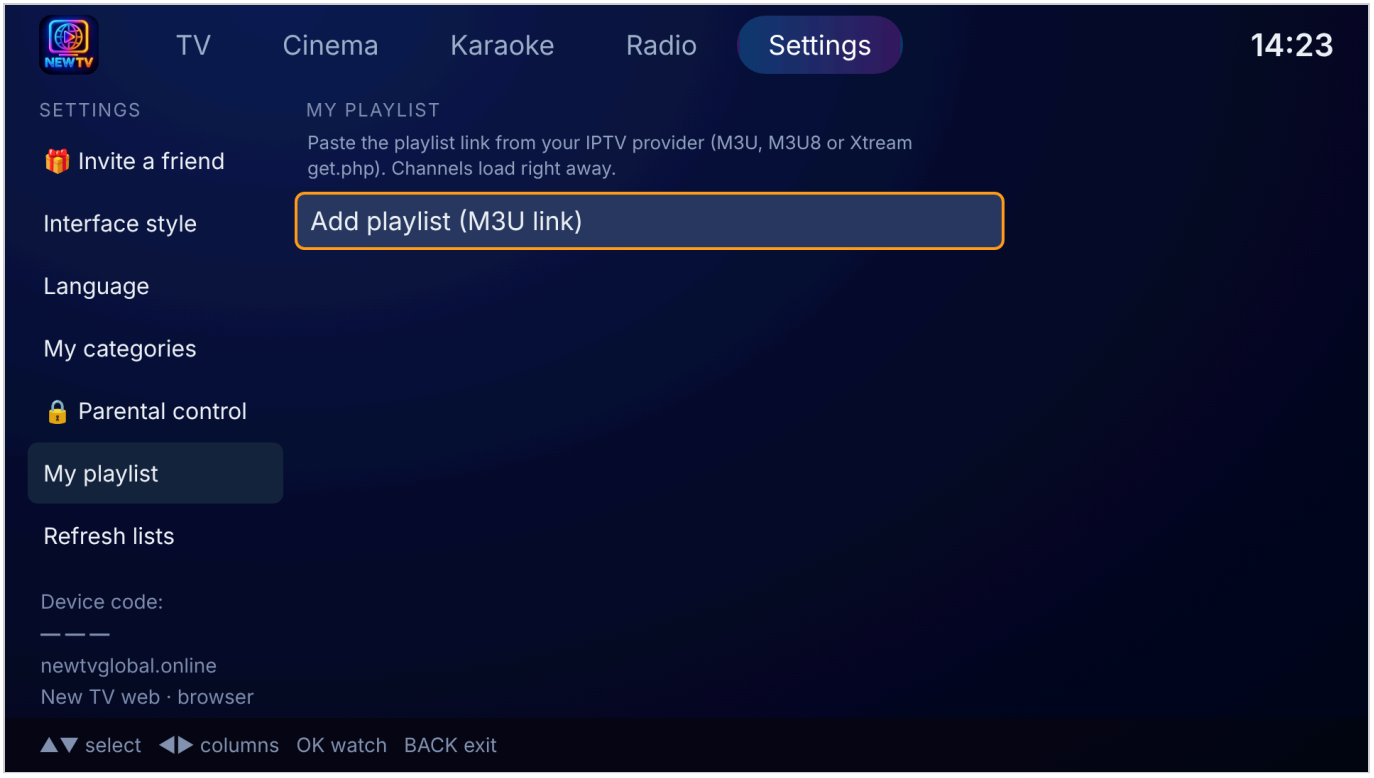

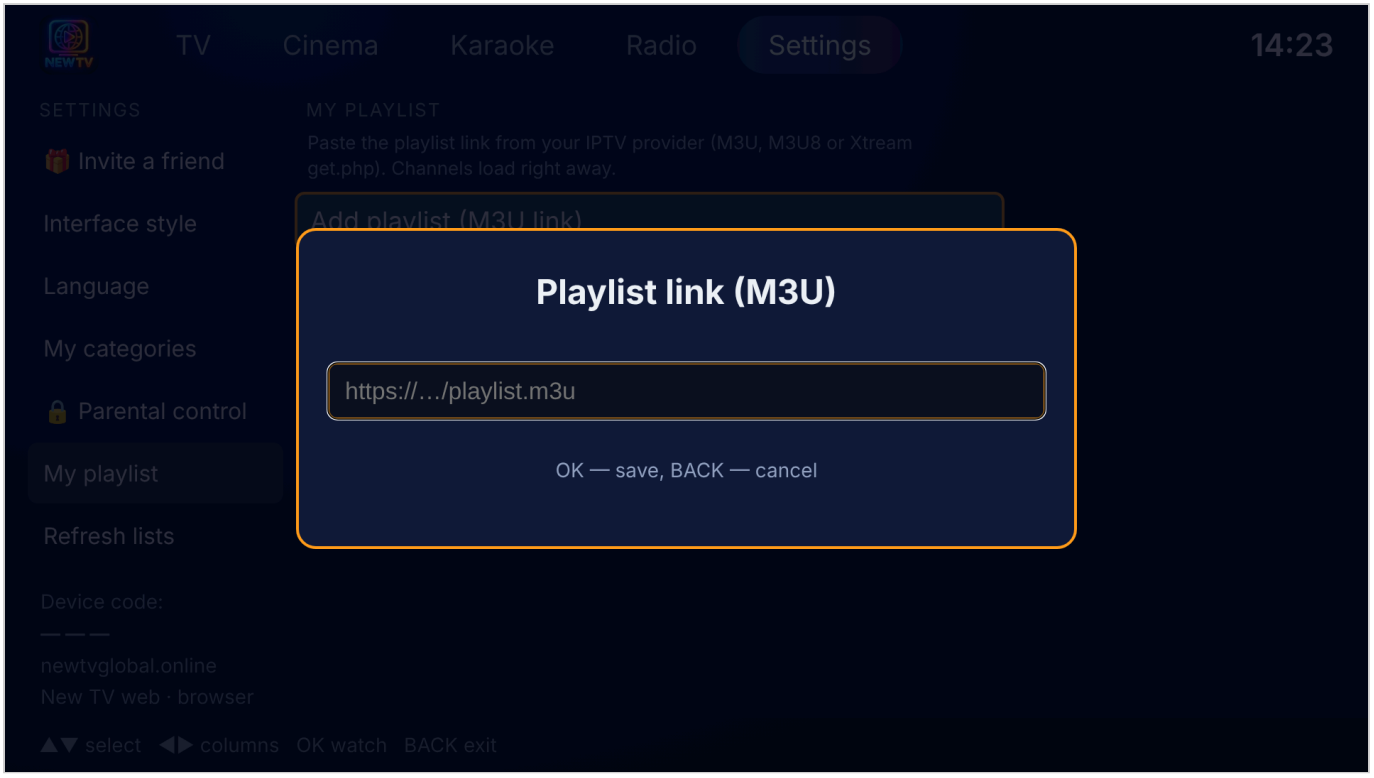

Step 4 — Playback. Press OK on a channel to play it full screen. Up/Down or CH+/CH− switch channels, OK shows the info bar, BACK returns to the list.

Step 5 — Cinema. Press Up to reach the top menu and Right to open Cinema: movies by category with posters. OK plays a movie; Pause/FF/RW work during playback.

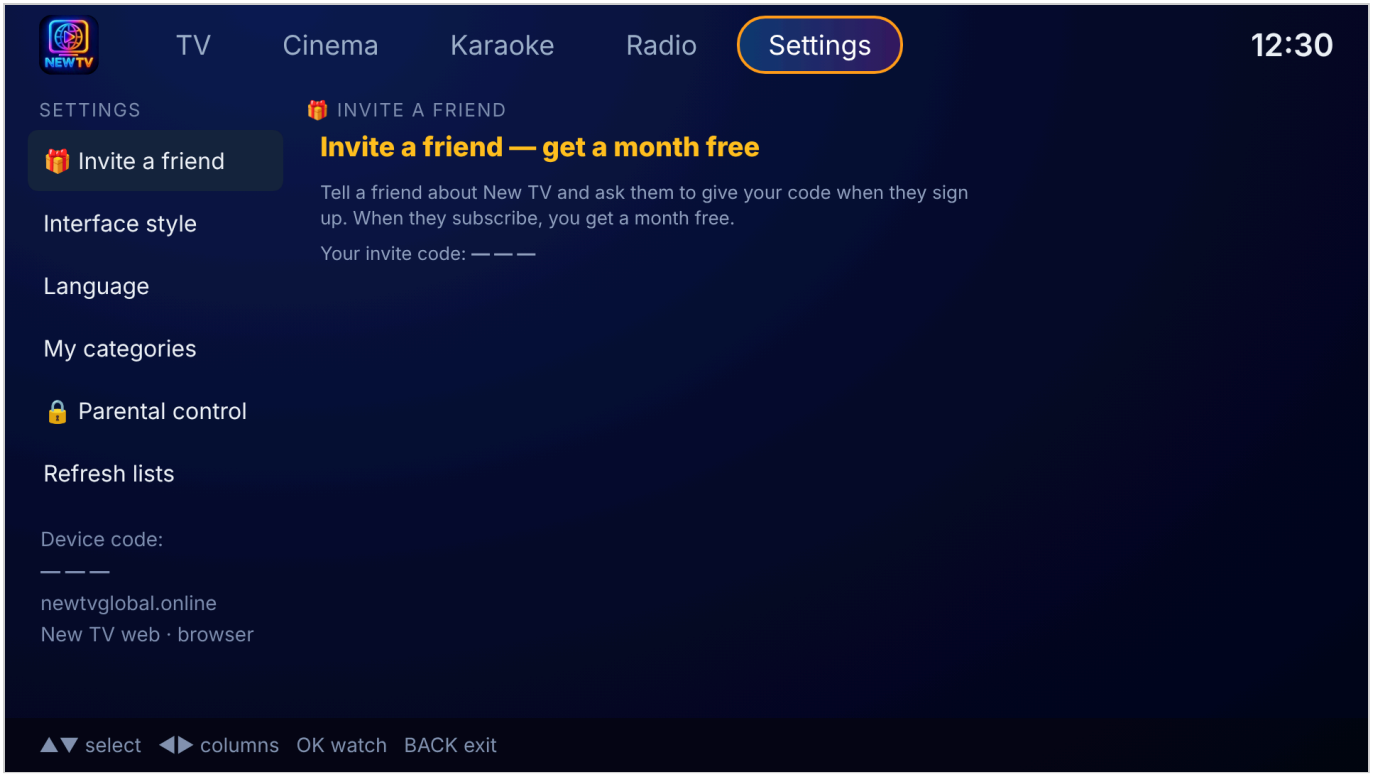

Step 6 — My playlist. Settings > My playlist > Add playlist (M3U link): enter a playlist link and press OK; the channels from that playlist load immediately and are kept after restart. "Remove my playlist" returns the app to the start screen.

Step 7 — Settings. Interface style, Language, My categories, Parental control (PIN for selected categories), Refresh lists, device code.

4. Purchases, advertising, accounts

No in-app purchases, no subscriptions and no advertising in the app. The app does not provide any content; it only plays playlists supplied by the user or by the user's own provider. No user account, login or password exists in the app. Privacy policy: https://aliba210890-del.github.io/newtv-releases/privacy.html
